Portland, OR 97209

Bob-

Please find enclosed a DVD copy of the March 2009 *Draft Interim Construction Report, Revetment Source Control Measure* for the Arco Site. The document describes the new seawall and near-shore sediment removal source control measures conducted in 2007 and 2008, including as-built drawings, removed soil/sediment volumes/weights, water quality monitoring data, and post-excavation sediment sampling results. This new physical and contaminant information should be incorporated into the in-water RI/FS and the LWG's database. In addition, please have the post-excavation sediment analytical results (Tables 6-9 and 6-10) added to the Query database.

Please call me at (503) 229-5326 if you have questions.

Sincerely,

Tom Gainer, P.E.
Project Manager
Portland Harbor Section
